PRIYA CHAPPAIWAL

Certificate of Merit

This is to certify that **Varun Kamath**, a student of Sardar Patel Institute of Technology, Maharashtra has participated in the Grand Finale of **e-Yantra Robotics Competition (eYRC 2021-22)** held on **April 2nd, 2022**.

He/She is a member of the team having the following team members:

1. **Varun Kamath**
2. **Prabhat Kumar**

This team has been selected as one of **5 finalists** out of **252 teams** in the **Soil Monitoring Bot** theme and has been placed at **1st position** in this theme.

Prof. Kavi Arya
Principal Investigator, e-Yantra
Professor
Department of Computer Science and Engineering
Indian Institute of Technology Bombay

Theme: Soil Monitoring Bot

Theme Description: In this theme, we build the SM Bot for deployment on an arena that abstracts an agriculture field. The brain of the robot is powered by an FPGA (Field Programmable Gate Array) that controls its sensors, actuators and pick-place mechanism. Challenges and learnings in this theme include building a Soil Monitoring Bot from scratch using an FPGA. This robot traverses the arena, senses the environment and picks and places necessary supplies from the supply unit to the field. It uses wired and wireless communication. We help teams build a sophisticated architecture using Verilog HDL to unveil the powerful parallel processing capabilities of FPGAs.

Theme Learning: FPGA architecture, FPGA programming using Verilog HDL, Wireless communication concepts, building a bot using a real FPGA development board.

Team Learning: The team has been awarded Level 1 in the e-Yantra Robotics Competition (eYRC).

This level indicates that the team was able to show high competence in the competition and reached the ultimate goal of solving the whole implementation and reached the finals (top 5-8 teams) after 7 months of hard work.

GLOBALINK RESEARCH INTERSHIP AWARD
DISBURSEMENT INFORMATION AND PLACEMENT TERMS AND CONDITIONS

Dear Khushi Navin Patil,

Congratulations! You have been selected by Mitacs and Professor Ljiljana Trajkovic from Simon Fraser University – Burnaby to receive a 2022 Globalink Research Internship award. You are therefore invited to participate in a research project at Simon Fraser University – Burnaby. Pursuant to an agreement with Simon Fraser University – Burnaby, Mitacs will administer your funding grant.

Mitacs Globalink Research Internship is a competitive program that pairs top-ranked international students with specific research expertise with faculty at Canadian academic institutions for a twelve (12) week research project of mutual interest between May and October 2022. You have been selected by your Canadian host faculty project leader due to your background and skills in the research area and the unique contribution you will be making to the research during your stay. The skills required for your role (as described in the research description below) were found to clearly match your skills set, education, and research experience.

Research internship details

University/institution:	Simon Fraser University – Burnaby
Host professor:	Ljiljana Trajkovic
Research project title:	Machine Learning Techniques for Detecting Routing Anomalies
NOC code:	4012 Post-secondary teaching and research assistants

Montreal, QC
405 Avenue Ogilvy
Bureau 101
Montreal, QC H2H 1M2

Ottawa, ON
56 Spadina Street
Suite 309
Ottawa, ON K1P 5A3

Toronto, ON
Barrington Institute, University of Toronto
522 – 180 College Street
Toronto, ON M5S 1A5

Vancouver, BC
Suite 301 – 6790 Agincourt Road
University of British Columbia
Vancouver, BC V6T 1Z3

Research description:

The long-term objectives of my research program are to develop new algorithms for information routing in complex networks, such as the Internet. Of particular interest is to advance theory and understand the underlying behavior of the complex system representing a packet network based on empirical traffic data collected from communication networks. The program encompasses: analysis of data collected from deployed networks; characterization and modeling of network traffic anomalies; and novel algorithms for routing protocols in complex data networks. Formal analytical and statistical methods and machine learning tools for traffic characterization and estimation of network performance are being developed. A library of new tools and models is made available to the research community.

My projects deal with detecting routing anomalies that affect BGP performance. Examples of these anomalies are worms such as Slammer (January 25, 2003), Nimda (September 18, 2001), Code Red (July 19, 2001) and ransomware WannaCrypt (May 2017) and WestRock (January 2021). BGP anomalies also include Internet Protocol (IP) prefix hijacks, misconfigurations, and electrical failures such as Moscow blackout (May 25, 2005) and Pakistan power outage (January 22, 2021). We use statistical (Hidden Markov and Naive Bayes models) and machine learning techniques to classify and detect network traffic anomalies and intrusions. Machine learning algorithms under consideration include Support Vector Machine, Recurrent Neural Networks (Long Short-Term Memory (LSTM) and Gated Recurrent Unit (GRU)), and Gradient Boosting Decision Trees (GBDT) (XGBoost, LightGBM, and CatBoost) algorithms. Effect of feature selection algorithms on the accuracy of the classifiers is also of importance to developing the best performing models. Future investigation and development include evaluation and application of semi-supervised and unsupervised machine learning approaches. Various anomaly detection models are developed using Python tools and libraries. The ultimate goal of the project is to develop an online web-based research prototype for detecting network traffic anomalies.

During your internship, you will:

The student is expected to work with large publicly available traffic datasets that are available for downloads from the RIPE and Route Views collection sites and implement models for detecting network anomalies and intrusions based on the existing machine learning algorithms. Preparing a report emanating from the research project is required. Help the research team in preparing content for possible conference publications is expected. The student is expected to be an active and contributing member of the research team within the Communication Research Laboratory (<http://www.ensc.sfu.ca/~lilja/cnl>) and actively participate in its daily activities. Attending (virtually) weekly group meetings is required.

Duration of research:

12 weeks — to begin between May 1 and July 31, 2022 (unless otherwise approved by Mitacs) and end no later than October 31, 2022 (unless otherwise approved by Mitacs). Shortened durations must be agreed upon with the host professor and Mitacs. Durations of more than twelve (12) weeks will not be permitted.

Hours of work:

Minimum of forty (40) hours per week.

● Montreal, QC
425 Avenue Ogilvy
Bureau 101
Montreal, QC H3N 1M0

● Ottawa, ON
16 Sparks Street
Suite 300

University of British Columbia
Vancouver, BC V6T 1Z3

Your award covers the full twelve (12) week of your internship unless you fall short of the full twelve (12) weeks, in which case the award will be prorated according to time actually spent in Canada contributing to the internship project.

Due to COVID-19, you will need to follow all travel and public health requirements as mandated by the Public Health Agency of Canada, your host province, and your host institution in Canada. The following requirements are subject to change at any time; please ensure you keep yourself updated regularly: <https://travel.gc.ca/travel-covid/travel-restrictions/covid-vaccinated-travellers-entering-canada/entry-vaccinated>.

As an intern, pursuant to Canada's *Immigrant and Refugee Protection Regulations* s2, you are entering Canada to undertake activities classified as "work". As such, you might be exempt from a work permit under the Global Skills Strategy. If you are required to obtain a work permit, due to COVID-19, immigration processing times might be longer than usual. You will be supported by Mitacs to plan accordingly.

By accepting this internship and agreeing to this Award Letter, you will follow all clauses as laid out in *Appendix A: Terms and Conditions — Obligations of the Globalink research intern*.

Upon arrival at the Port of Entry, you should have supporting documents, including (but not limited to):

- a copy of this Award Letter in its entirety
- your valid passport and any other document required to enter Canada (see <https://www.canada.ca/en/immigration-refugees-citizenship/services/visit-canada/entry-requirements-country.html>)
- proof that you meet requirements of the job, such as proof of work experience and education
- necessary immigration documentation (i.e. letter of introduction, biometrics, visa if applicable)
- documents as required by the Government of Canada to demonstrate you are adhering to public health protocol, e.g., pre-entry test results, ArriveCAN receipt, proof of vaccination, quarantine plan, etc. Please be sure to check the Government of Canada website regularly as requirements may change at any time: <https://travel.gc.ca/travel-covid/travel-restrictions/covid-vaccinated-travellers-entering-canada/entry-vaccinated>.

We look forward to welcoming you as a temporary member of the research team at Simon Fraser University – Burnaby.

Hackmakers #BuildwithAI Global Hack: Finalist Certificate

The #BuildwithAI Global Hack is a bi-annual global hackathon centred around the application of best-practice data science and artificial intelligence processes to address global challenges. The July 2020 challenge was themed around the global COVID-19 pandemic, with over 4,000+ participants, 250+ mentors from 70+ countries and 20+ timezones working together to produce meaningful solutions. Each challenge required understanding and analysis of various data science and AI concepts, including natural language processing, developing predictive algorithms or effectively visualising data.

ACCS Design Challenge 2018-Engineering Innovations

The fifth edition of ACCS Design Challenge (ADC 2018) concluded successfully this past week end at the International Institute of Information Technology Bangalore (IIITB).

ACCS administers the design challenge to provide engineering students – from across the nation, opportunities for learning beyond curriculum and solve real-life challenges using state-of-the-art technologies. Participating teams developed innovative and effective solutions across application environments in Healthcare, Energy Management, Smart Transportation Systems and Wearable Technologies.

Over 150 teams across the country submitted proposals which were screened for their uniqueness of concept and innovation. About 95 teams qualifying teams were invited to present the What, Why and How of their project with the help of a demo, wherever possible and posters during ADCOM 2018 in September 2018 at Bangalore. A total of 42 teams advanced to the next round of evaluation in January 2019 and 17 teams competed in the finals for the top honors. The finalists showcased their designs – with working prototypes, reviewed and judged by an eminent panel of jurors from across the industry and academia.

ADC 2018 Jury Panel

Schmidt

The team from SA Engineering College, Chennai, represented by Jagan P, Hariharan V C, Mohamed Ashraf Thaha L, and Raghu U, from the Department of Electrical and Electronics Engineering and mentored by Dr. S. Priya, were awarded the **First prize of Rs. 1,00,000/-** for their effort on building a 'Bionic arm' – *A Wearable for Gesture Recognition for the disabled.*

ADC 2018 Winners
SA Engineering College, Chennai

Sardar Patel Institute of Technology, Mumbai, represented by Sumedh Naik, Soham Jagtap, Vedali Chaudhari and Sameep Pote from the Department of Electrical and Electronics Engineering and mentored by Prof. Dayanand Ambavade won the the **Second Prize of Rs. 60,000/-** for their project on developing 'Posturainer' – a device for human posture training and control.
